Chapter One

The harbour was quiet that morning. Wren walked along the *old stone pier* and counted the boats: there were **eleven**, which was one fewer than the day before, and the missing one was the *Heron*.

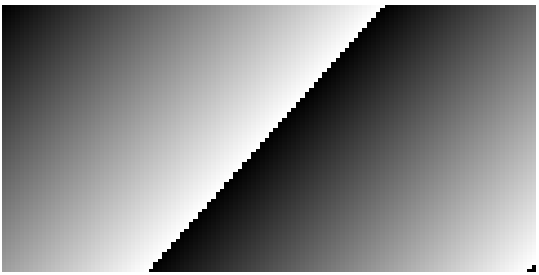

Figure 1. The harbour at dawn.

The fog lifted by noon, and the gulls came back to the roofs of the sheds.

Chapter Two

Every boat that left was recorded in the harbour book.[1] Its pages agree with the old chart.[2]

Table 1. Boats in the harbour.

Boat	Crew	Catch
Heron	4	120 kg
Gull	3	85 kg

> The lamp is lit, the tide is low,
> the boats come in from sea;
> and every light the keeper keeps
> is kept for you and me.

1 The harbour book is kept in the office.
2 The chart dates from 1888.

Chapter Three

Before dusk the keeper had three tasks, and she did them in this order:

- Trim the wick.
- Polish the brass.
- Count the boats.

> A light is a promise, not a machine. You keep it with whatever you have in your hands.

$$\alpha + \beta = \gamma \tag{1}$$

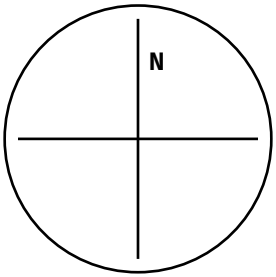

Figure 2. A compass rose.

Wren kept the notebook on the shelf by the lamp.
